

*Hello I'm*  
**PAWTERFLY**

**BREED:**  
A MIXTURE OF DOG, COW AND  
BUTTERFLY SPECIES

**LIFE EXPECTANCY:**  
5-15 YEARS

**HABITAT:**  
ANIMAL CAN BE FOUND IN  
FORESTS AND AQUA HABITATS

## ABOUT ME

Pawterflies can generally be found in forests or aqua habitats. When spotting a pawterfly they are usually found in groups of 3-5. Pawterflies tend to be very shy at first but warm up once trust is gained. Unlike most species, the pawterfly can be domesticated since they only grow to about 23cm. The male pawterfly carries the children but the females lactate.

### NUTRITION:

An average pawterfly specie eats an average of 5 meals a day. Although the Pawterfly seems very small many underestimate their fast metabolism system. Their meals mainly contain insects, plants and lots of water.

### FUN FACTS:

- A pawterfly can consume up to 3 gallons of water a day
- At birth the Pawterfly has an equivalent weight to 2 toonies
